

GPS Performance products are Informed-Sport Certified

If you are an elite or amateur athlete, a coach, a nutritionist or anyone who faces drug testing, you can now be assured that GPS Circulate, GPS Energize, GPS Hydrate, GPS Rebuild and GPS Reset have been Informed-Sport tested and are free of banned substances.

These products have been validated to be free of banned substances through LGC, an anti-doping laboratory organization and are certified through their Informed-Sport program. Informed-Sport Certification can be identified by the below logo and found on each individual product page on shop.livepure.com.

What is Informed-Sport Certification?

The Informed-Sport program was developed to minimize the risk of banned-substance contamination within sports supplement products. Certification involves:

- Completion of a Manufacturing Assessment Questionnaire
- Pre-certification testing of an agreed number of samples
- Post-certification testing of every batch of product
- Additional “blind” independent testing

For more information and explanations of the testing process, visit https://www.informed-sport.com/#view_video.

What substances does Informed-Sport screen for?

Products tested for Informed-Sport certification are screened according to substances listed by the World Anti-Doping Agency (WADA). WADA was founded by the International Olympic Committee (IOC) to curb the use of ergogenic aids, which would give athletes an unfair advantage. This list includes dozens of substances put into seven categories: androgens, peptide hormones, stimulants, diuretics, narcotics and cannabinoids.
